Headquartered in Maryland, IT-CNP is a premier provider of enterprise government-oriented Information Management, Cyber Security, Hosting and Customized Helpdesk solutions.

We are committed to helping our clients and partners meet unique IT business challenges by delivering proven solutions and expertise. IT-CNP provides certified applications, network and security professionals with solid technical background experience to address a full range of information technology hardware and software challenges.

Our technical support professionals are pre-screened and credentials investigated before they are offered a position. IT-CNP's Team is comprised of seasoned professionals of diversified backgrounds and abilities with one goal in mind - to deliver a multitude of world class services to our government customer with 100% customer satisfaction.

IT-CNP employs a project management methodology that includes close interactions with the client to create a plan that defines what will be delivered as well as how success, performance and completion will be measured. We also conduct regular project progress reviews to ensure that projects meet their stated objectives, timelines, tollgates, milestones and deliverables.

We want to serve as a strategic partner with our clients, helping them achieve their missions through gains in productivity, streamlined operations and enhanced services. Our mission is to help our clients progress toward the future by assisting their efforts in implementing modern, complex and secure technology solutions.

We achieve this by committing to quality and 100% customer satisfaction in all that we deliver, providing an objective analysis, and dedication to maintaining long-term relationships.

Our Information Management Solutions practice consists of a variety of premier software development, maintenance and support services, network design, management and integration support, system and application configuration management, as well as specialized technology training services.

IT-CNP's Cyber Security Solutions practice consists of FISMA-compliant cyber security solutions that include information security policies, assessment of threats, including their likelihood and impact, contingency planning, periodic risk assessment, security audit, security compliance reporting as well as independent security verification and validation. (IV&V).

IT-CNP's Government-Oriented Hosting Solutions practice consists of hosting industry's best practices utilized at our FISMA-compliant and audited, 100% availability SLA, as well as over a hundred of management, operational and technical controls to accommodate the most demanding security needs required by government hosting technology projects.

IT-CNP's Custom Helpdesk Solutions practice consists of outsourced custom application, infrastructure or security helpdesk solutions, on-demand call center solutions combined with on-line helpdesk and knowledgebase support portals customized to each customer's unique requirements.
