Headquartered in close proximity to Washington DC, IT-CNP is a premier provider of enterprise management oriented information management, effective cyber security, hosting and customized helpdesk solutions.

Effective managed implementation of comprehensive and effective cyber security strategy has become one of the most important national priorities of our times. Each government agency is individually responsible for continuation of improvements in its cyber security posture.

With comprehensive cyber security and other critical telecommunications demands increasing while workforce decreasing, government agencies and other organizations experience an increased need for cyber security capabilities and improved cyber security management, control and response techniques.

IT-CNP's robust cyber security solutions practice consists of FISMA-compliant cyber security solutions that include information security policies, assessment of threats, including their likelihood and impact, contingency planning, periodic risk assessment, security audit, efficient security compliance reporting as well as independent security verification and validation. (IV&V).

Strategic Cyber Security Support Services

IT-CNP provides expert cyber security support consulting advice, guidance, and facilitation regarding current cyber security practices, improvements, services, and other support products in order to assist agencies with their cyber security program management and efforts which enable them to meet new

Proactive internal cyber security controls assure:

- ▣ Uninterrupted availability of information system resources
- ▣ Confidentiality and integrity of information systems and their contents
- ▣ Effective robust user authentication and access controls
- ▣ Increased security of communications and critical infrastructure
- ▣ Interoperability of systems for authentication on networks
- ▣ Compliance with information technology security requirements
- ▣ Standardization of security settings for a wide range of systems
- ▣ Reliability, confidentiality and integrity of information exchange
- ▣ Existence of accountability mechanisms assuring security compliance

IT-CNP provides specialized cyber security services that assist agencies in providing a safe and secure cyber environment, in which to carry out critical business activities while implementing a departmental cyber security process to ensure that cyber security related policy directions as defined by legislative requirements as well as President's Management Agenda guidance and circulars on cyber security are implemented consistently across the complex.

cyber security challenges and continuously improve their mission performance.

By identifying vulnerabilities and implementing corrective measures, IT-CNP's security experts assist government agencies to effectively reduce the number of opportunities for system compromise, resulting in an overall improvement in the level of protection afforded our information resources.
